

GROUND MAT

- The portable protective ground mat provides a method for workers to establish an equal potential zone for multiple grounding applications. The ground mat is manufactured of vinyl polyester fabric, with high ampacity, tinned-copper braid sewn into a grid pattern. The braided copper on the grid connects to a six inch termination stud on the corner of the mat. The ground mat is then bonded to the equipment being worked on by using a safe and reliable ground cable assembly.
- Three sizes available
- Bond multiple mats together
- Two materials available, standard yellow and black anti-skid
- Easy to store
- Reversible
- Easy to clean with standard hose pressure or a power washer (allow to dry before storing)
